MEDICAL ASSISTANCE (MEDICAID) FINANCED UNDER TITLE XIX OF THE SOCIAL SECURITY ACT
August 1973

HIGHLIGHTS

Recipients

1. Over seven million persons (7,330,919) had payments made in their behalf for medical services.

2. Children under age 21 represented the largest group of recipients for whom payments were made to medical vendors--36.0 percent of the total.

3. Persons aged 65 and over represented the second largest group of recipients--24.9 percent of the total.

Payments

1. Total payments to vendors providing medical services were $809 million.

2. Payments for persons aged 65 and over accounted for the largest proportion of such payments--$284 million or 35.1 percent.

3. Payments for individuals in families with dependent children amounted to about $270 million or 33.4 percent of total payments.

This report was prepared by Patricia G. White, staff member, National Center for Social Statistics. Overall direction was provided by Henrietta Duvall, Acting Chief, Medical and Rehabilitation Statistics Branch. Statistical assistance was provided by Dorothy C. Jackson of the Administrative Services staff.

INTRODUCTION

For the middle month of each calendar quarter, State agencies receiving grants-in-aid for medical assistance under title XIX of the Social Security Act report the number of people who received medical assistance and the amount of payments to medical vendors. This release presents a summary of the data reported for August 1973

Beginning January 1, 1970, Federal financial participation in payments to medical vendors was limited to payments under State medical assistance programs established under title XIX of the Social Security Act. Forty-five jurisdictions had such programs prior to January 1, and on that date, seven additional States established a medical assistance program. Arizona has not initiated a program under title XIX. Alaska initiated a program in September 1972 but did not report for August 1973. Colorado has also not reported for August 1973. The data in this report are therefore limited to 51 reporting jurisdictions.

Quarterly releases in this series covering data for the middle month of each quarter were initiated in May 1967. The releases through November 1969 presented national and State data separately for medical assistance programs administered under title XIX and medical assistance furnished under the other public assistance programs of the Social Security Act, (titles I, IV-A, X, XIV, and XVI).

All data are excluded on premium and per capita payments made into the Social Security Administration system and on recipients in whose behalf only such payments were made. These data are included in all of the releases through February 1972. Because premium payments comprise so small a proportion of the total expenditures, yet are made every month for a sizable group--including many for whom no medical service actually is provided--an analysis which excludes these payments and the people on whose behalf they are made is more meaningful than one in which they are included. Payments for early and periodic medical screening of individuals under age 21 and persons in whose behalf only such payments were made are not included in Tables 1 - 11. The payments for this type of service are shown in Tables 12 and 13.

STATISTICAL SUMMARY

About 7.3 million people had payments for medical care made in their behalf in August 1973. Total expenditures for bills paid during August came to $809 million.

Distribution of recipients and payments by basic eligibility factor.--Recipients of medical assistance are classified into five groups on the basis of the eligibility factor that enables then to qualify for medical assistance, i.e., age 65 or over, blindness, permanent and total disability, membership in a family with dependent children under age 21, and "other." The largest group of recipients--52.6 percent--were members of families with dependent children; but the largest part of the payments--35.1 percent--went to the aged, who comprised 24.9 percent of all recipients. Bills paid for members of families with dependent children accounted for 33.4 percent of the total. Recipients who were permanently and totally disabled represented one-eighth of all recipients, but their medical bills came to 23.2 percent of all payments. The disparity between the percentage of total medical vendor payments for the aged and permanently and totally disabled recipients compared with the percentage of the total number of recipients these groups represent, probably reflects the greater utilization of hospital and nursing home care and intermediate care facility services by these groups. The average cost per person receiving these types of service is known to be relatively high.

Distribution of recipients and payments between money payment recipients and others.--Almost three-fourths of the people who had their medical bills paid in August were recipients of money payments; their bills, however, accounted for 53.9 percent of the payments to medical vendors. This disparity between the percentage of medical assistance recipients and percentage of payments accounted for by the money payment group is apparent in each of the categorically related "eligibility groups".

The situation is different among those for whom money payments are not authorized. Included in this group are first, the "medically needy only," who are likely to seek help because of high medical bills; and second, aged individuals in nursing homes and institutions for the mentally ill who do not receive money payments so long as they remain in the home or institution, but for whom the monthly medical payment on the average is relatively high. Both of these factors accounted for larger medical payments on the average for those individuals not receiving money payments. Among those aged 65 or over who got medical assistance, the variability between recipients and payments accounted for by the money payment group is the greatest. Slightly less than three-fifths of the aged whose bills were paid were money payment recipients, but their medical bills accounted for only 29.6 percent of payments to medical vendors on behalf of the aged. This proportional variance is probably accounted for by the fact that--(1) a larger proportion of the non-money payment recipients aged 65 and over for whom bills were paid were receiving institutional type care (nursing home, intermediate care facility, or institution for the mentally retarded),

(2) most of these individuals are not eligible for a money payment while receiving care in these institutions because they have sufficient incomes to meet their personal and incidental needs, and (3) the cost of these types of medical services are exceptionally high compared with the cost of other medical care and services for which payments are made under title XIX.

Under the other eligible categories (blind, disabled, and families with dependent children), individuals who were also money payment recipients comprised the largest percentage in each category--families with dependent children--88.7 percent, blindness--86.4 percent, and disability--79.9 percent. As among the aged, medical bills paid for the money payment recipients in each of these groups comprised a smaller proportion of the total payments.

INTERPRETIVE NOTES

Limitations of monthly data

The significance of monthly data is severely limited by the fact that the amounts reported represent primarily bills paid during the month, and, as such, are subject to fluctuations unrelated to the provision of medical services. Similarly, the numbers of recipients represent individuals for whom one or more bills were paid during the month. For a single spell of illness, an individual may receive several medical services all in the same month. If the agency received and paid all the bills during a single month, the recipient and the total amount of payments would be included in one monthly report. Usually this does not happen. Instead, the receipt and payment of bills is spread over several months and the recipient and the amount paid will be reported for all the months in which one or more bills are paid.

Furthermore, some people have several incidents of illness during a year and others have only one--or none. No one month--no brief period--of experience can be representative of a program's potential or of the cost of meeting such varying need. For this reason, data on consumption of medical services customarily are presented for twelve-month periods.

Monthly data are collected and presented only to meet the pressing current demands for minimum information of the medical care financed from public assistance funds. In addition, States are required also to provide more significant annual data on the number of people whose medical care is financed from public assistance funds and on the amounts, kinds, and costs of service provided.

Description of data reported

The Federal law authorizing State medical assistance programs under title XIX identifies two major groups of eligible people. First, there are those who need cash assistance to enable them to meet the cost of food, clothing,

shelter, and other daily needs and who obviously also need help with their medical bills, both large and small. Medical assistance programs under title XIX as a minimum, must cover a substantial number of those falling in this group. 1/ The second group comprises those who usually are referred to as the "medically needy only", i.e., those who can manage to finance their daily needs on their own but who need help to pay their medical bills, especially if these are large. States establishing medical assistance programs under title XIX have the option of including this second group.

The accompanying tables classify the people who receive medical assistance (and the payments made) into three groups: (1) those for whom a money payment was authorized; (2) those financially eligible for money payments but who do not receive them; and (3) those for whom a money payment was not authorized because they were "medically needy". Some States also may count in the second group, people who were authorized to receive a money payment when the medical service was provided but who were not so authorized when the vendor was paid; other States may continue to identify these people as those for whom money payments were authorized and to so report them when the medical bill is paid. Furthermore, all those who are classified as "money payment authorized" did in fact have this status, but the group may be more inclusive in some States than in others.

Each of these three groups is further classified to show the basic eligibility factor that qualifies the individual to receive medical assistance. The basic eligibility factors are:

(1) Age 65 or over
(2) Blindness
(3) Disability
(4) Member of family with dependent children under age 21
(5) Other, including children under 21 who are not properly classified under (4) and individuals 21 to 64 years of age who are not properly classifiable under (2), (3), or (4).

Groups (1) through (4) include people who receive money payments or who could qualify for a money payment under one of the federally aided money payment titles if they were "needy" within the State's definition and had to meet only such other requirements as are specified in the Federal Act. These people are "categorically related".

1/ Coverage is mandatory for all those aged 65 or over, the blind, the permanently and totally disabled, and members of families with dependent children who meet the minimum eligibility requirements specified in the Federal Act under titles I, X, and XIV, and/or XVI or title IV-A; and who are eligible for a money payment under the State's definition of a needy person. Coverage is mandatory also for children up to age 21 who, except for age and/or school attendance would be eligible for money payments under title IV-A.

People falling in group (5), regardless of how needy they are, would not be eligible for a money payment under a federally aided category because they fail to meet one of the basic eligibility conditions specified in the Federal Act. They are, therefore, not categorically related. Those under 21 years of age include children in foster care and children living in families with both parents, neither of whom is disabled or unemployed, but whose incomes are low enough to permit the children to qualify for medical assistance. Federal financial participation is available in payments for these children. Individuals included in this group who are 21-64 years of age are those who do not meet the test of blindness or disability specified in the Federal Act but who are eligible for medical assistance under the State's plan. Federal financial participation is not available in medical assistance furnished to this group.

1/ Arizona has no program.
2/ For Colorado, Maine, and Utah, general hospital care includes mental; for Colorado, New Mexico, and Ohio, "all other" intermediate care facility includes institutions for the mentally retarded.
3/ Other care includes where indicated one or more types of the specified services.
4/ Does not include payments to medical vendors by health-insuring or health maintenance organizations.
5/ Includes general assistance medical vendor payments.
6/ Partly estimated.
7/ Delta Plan Insurance premiums.

Table 13.--Percentage distribution of medical vendor payments financed under title XIX of the Social Security Act, by specified type of service and State, July-September 1973 1/

/Does not include premium payments into Social Security Administration system./
